FAP - N-terminal

Remove 2 residues: X-Pro|non-Pro

ANPEP / CD13

exposed N-terminus only

0 motif matches / 1 assessed bond - partial recognition rule

○

ENPEP

exposed N-terminus only

M = motif match | hollow circle = assessed, no motif match | NA = not assessed. Enzyme presence and exposure are not measured.

DPP4: predicted log2(buffer control / treated substrate), source assay 4 h. Motifs have no numeric score; neither view gives a cleavage rate.

SCORES Separate native 0-1 tracks; joined assessed bonds are not smoothed. Dashed = 0.5 display threshold; gaps = unassessed.

RED All four cytosolic tracks assessed the bond and >=3 reached 0.5. Four filled/open beads show model concurrence, never probability.

MHC Up to 10/class: intended overlap, then allele diversity, then native rank. Red ticks inside bars are pre-binding cut evidence; full results stay in CSV.
